

Functions

Why Functions?

- Organization**
- Simplification**
- Reusability**

A Function Definition

```
int cube(int input)
{
    int output = input * input * input;
    return output;
}
```

Header

function name

return type

`int cube(int input)`

parameter list

{

`int output = input * input * input;`

`return output;`

}

Body

```
#include <stdio.h>
```

```
int cube(int input);
```

```
int main(void)
{
    int x = 2;
    printf("x is %i\n", x);
    x = cube(x);
    printf("x is %i\n", x);
}
```

```
int cube(int input)
{
    int output = input * input * input;
    return output;
}
```

```
void swap(int a, int b);
```

```
int main(void)
```

```
{
```

```
    int x = 1;
```

```
    int y = 2;
```

```
    swap(x, y);
```

```
    printf("x is %i\n", x);
```

```
    printf("y is %i\n", y);
```

```
}
```

```
void swap(int a, int b)
```

```
{
```

```
    int tmp = a;
```

```
    a = b;
```

```
    b = tmp;
```

```
}
```
